

What does a car battery number mean?

Car battery numbers provide essential information such as group size, cold cranking amps (CCA), reserve capacity (RC), and ampere-hour (Ah) ratings. Group size refers to the battery's dimensions and terminal placement, while CCA measures the battery's ability to start in cold weather. Car batteries are vital to the functionality of your vehicle.

What is the complete nomenclature for a battery?

The complete nomenclature for a battery specifies size, chemistry, terminal arrangement, and special characteristics. The same physically interchangeable cell size or battery size may have widely different characteristics; physical interchangeability is not the sole factor in substituting a battery. [1 ]

Which group size is best for a car battery?

Group Size 35: Typically used in newer domestic cars. To find the correct group size for your vehicle, check your car's manual or consult a parts store database. Using the wrong group size can lead to improper fit and connections, even if the battery's other specifications are correct. 2. Cold Cranking Amps (CCA)
