

How do I choose a battery charger?

Pick a charger that is appropriate for your battery and purposes. Most chargers will work for all types of batteries except Gel Cell batteries. There are fast chargers that can charge your battery quickly or even provide you with a jump start, as well as "trickle" chargers that provide a slow but longer lasting charge.

How do you charge a car battery?

You can either do this with the car battery in situ, or you can take the battery out first. Battery chargers are fairly self-explanatory: connect the '+' and the '-' to the battery terminals and turn the charger on. Most have lights to tell you the state of charge and when the battery is full.

How do I properly charge my battery?

In order to properly charge your battery, you must first identify the type of battery you have. You can usually find this written somewhere on the battery, but you may need to check the manufacturer's website if the label is too worn to read or missing.

How long does it take to charge a battery?

The charging time will depend on the charger and the condition of the battery. It can take several hours to fully charge a depleted battery. Once the battery is fully charged, turn off the charger and unplug it from the power outlet. Following this, you will need to disconnect the charger clamps from the battery terminals.

Do you need a battery charger?

Whether you need a new battery, the car just needs a helping hand to start in cold weather, or if you inadvertently left the lights on for a few hours, a battery charger can get you back on the road again.

What kind of battery charger do I Need?

Check what kind of battery your vehicle has: If your car has start/stop technology, you'll have an AGM or EFB battery. A conventional charger isn't suitable for these types of batteries, and you'll need a 'smart' charger instead. If you're not sure what kind of charger your battery might need, pop into one of our stores and we can help you out.
