

The development model of large-scale energy storage

What's new in large-scale energy storage?

This special issue is dedicated to the latest research and developments in the field of large-scale energy storage, focusing on innovative technologies, performance optimisation, safety enhancements, and predictive maintenance strategies that are crucial for the advancement of power systems.

Why are large-scale energy storage technologies important?

Learn more. The rapid evolution of renewable energy sources and the increasing demand for sustainable power systems have necessitated the development of efficient and reliable large-scale energy storage technologies.

What is large-scale energy storage?

Large-scale energy storage enables the storage of vast amounts of energy produced at one time and its release at another. This technology is critical for balancing supply and demand in renewable energy systems, such as wind and solar, which are inherently intermittent.

When did energy storage technology start?

The large-scale development of energy storage began around 2000. From 2000 to 2010, energy storage technology was developed in the laboratory. Electrochemical energy storage is the focus of research in this period. From 2011 to 2015, energy storage technology gradually matured and entered the demonstration application stage.

How has energy storage changed over 20 years?

As can be seen from Fig. 1, energy storage has achieved a transformation from scientific research to large-scale application within 20 years. Energy storage has entered the golden period of rapid development. The development of energy storage in China is regional. North China has abundant wind power resources.

What are the emerging energy storage business models?

Help energy storage establish a reasonable value realization method and provide a good market survival environment for energy storage. The independent energy storage model under the spot power market and the shared energy storage model are emerging energy storage business models. They emphasized the independent status of energy storage.
