

What is the most expensive battery metal in 2021?

Cobalt was by far the most expensive battery metal until late 2021, which was when lithium prices hit an inflection point, heading towards all-time highs. A single tonne of lithium carbonate, one of the refined forms of lithium that's used in batteries, now costs over \$80,000, up from around \$6,500 at the beginning of 2021.

What is a lithium battery?

Lithium is a specialist chemical, not a standardised bulk commodity like copper or iron. The two commercial lithium compounds for EVs are high purity 'battery grade' lithium carbonate (Li_2CO_3) and lithium hydroxide monohydrate ($\text{LiOH}\cdot\text{H}_2\text{O}$). The choice between them is usually determined by what type of lithium battery is going to be produced.

Is lithium a pure metal?

It is never found as a pure metal in nature. Lithium in rechargeable batteries Due to its very small atomic mass the lithium atom has a high charge and power-to-weight ratio, making it well suited to rechargeable batteries, especially for EVs where weight is at a premium, but also in stationary energy storage systems (ESS) and portable electronics.

What is lithium ion used for?

Lithium is an essential component in lithium-ion batteries which are mainly used in EVs and portable electronic gadgets. Often known as white gold due to its silvery hue, it is extracted from spodumene and brine ores. After mining it is processed into:

Will lithium-ion battery pack prices rise in 2021?

After falling by 89% from 2010 to 2021, lithium-ion battery pack prices are forecasted to rise this year, according to BloombergNEF. Average battery pack prices are expected to increase from \$132 per kilowatt-hour (kWh) in 2021 to \$135/kWh in 2022.

What is lithium & why is it important?

Lithium is vital to the energy transition towards a low-carbon economy and demand is expected to increase by over 4x by 2030, reaching over 3m tonnes of lithium carbonate equivalent (LCE). Most lithium is mined as rock minerals in Australia, while significant quantities are also produced from salars in Chile, Argentina and China.
